

Quick overview / Background

The client required to develop fully customized software which would provide users with the most functional and user-friendly dating communication tool.

Requirements

Basing development on time-proven FlashComs products, we aimed at creating a multifunctional solution that would enable interaction among multiple simultaneous website users.

Solution

Solid platform behind FlashComs products allowed us to customize them without compromising robustness and user experience. We delivered a system that is user-friendly and addresses all special requirements of the client. We added the user's personal webcam to the video dock, created custom chat room lists. The customized version also enables each user to see a complete list of rooms without having to navigate away from the chat room. This and many other modifications contributed to creating a really pleasant chatting atmosphere for website members.
